

## Heli-Trade Corp.

Heli-Trade Corp. has developed and approved STC No. SR01226SE. This STC allows for operation as Pilot in Command from the left or right seat. This STC will allow for carrying passengers while operating under part 133, 135 and 137 from the left seat. Having this STC removes the mission limitations imposed by the FAA and allows for multiple mission operation from the left seat.

The installation of this STC also improves the safety of your operation and eliminates the possibility of a pilot encountering negative habit transfer by allowing the pilot to remain in the crew station they are accustomed. It also improves the mission flexibility and immediate response times to crew transport requests.
